

MOBENI CREMATORIUM UPGRADE AND EXTENSION

Address: 200 Higginson Highway
 Ward: 69
 Client: PRC
 Contract Period: Nov 2015 – Present
 Contract Value: R17.4million

PRC - Cemeteries have approached City Architecture to investigate and design the upgrade and extension of the existing Mobeni Crematoria. The Mobeni Crematorium sits within the Mobeni Cemetery and is currently having one of its incinerators replaced via the Mechanical branch of the Architecture Department - the request here is to look at an additional facility within the cemetery grounds to handle over-flow.

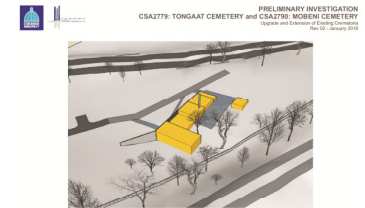

This project aims to provide additional cremation facilities to cater for the growth of cremations foreseen in the future. With the shortage of burial space increasing rapidly and minimal availability of land to develop new cemeteries, communities are being encouraged to consider alternative methods of burial, in particular cremation. In order to cater for the increase of cremations which are being encouraged, more cremation facilities are required.
